

## PT Center Construction Update

### DINING HALL / KITCHEN

Progressively, the Dining Hall has taken good shape. Once the roof took position, we started working on raising the remaining portions of walls and this is now complete. The next step is to get shutters. But in its state, the Hall will be 60% usable by May and will be used by 150 pastors' wives when they come for the Shalom Women's Conference.

### KITCHEN EXTENSION OR ANNEX

As most African cooking require, modern Kitchens need an extension to cater for specific local staples that Gas Cookers and modern stoves cannot handle, especially in the Eastern and southern Africa regions where we cook *matooke* and *posho / ugali* on fire stones with fire wood. We are therefore constructing this needed structure and it will be roofed by end of this week, and it will greatly improve our Kitchen services.

## UP AND DOWN BETWEEN THE MAIN CLASSROOM BLOCK AND DINING HALL

We also embarked on the stairs for accessibility to the dining Hall from the main block. The stairs are near completion and will be used by the next group on site for training.

## OUR NEXT FOCUS: ADMINISTRATION AND RESIDENCE

While all the current five structures on the PT Center site are relatively incomplete, they are usable to a large extent. The toilets and bathrooms as well as the main hall are in a more usable state than the rest, but usually with a roof a building structure will serve much of its intended purpose.

We yearn and pray for two more structures: An administration building and the initial residence. With these two, the eight main training activities for the PT Institute through the year, with an average of 80 people will be hosted fully.

An administration structure will provide space for us (8 PT Staff) to plan and arrange the work. The initial residence will allow some of our staff to be on site at all times, and hopefully save on their rental fees which are currently a great burden to us as a ministry. We would save on transport but also be on site 24 hours, giving the Institute momentum through our consistent activity at the Center.

We have the land and it was cleared for these structures. We also have enough bricks to raise one of the structures. The hard part in putting up such structures is always in the roofing which is often twice the cost of raising the rest of the building.
